

CMSC 215 Intermediate Programming Programming Project 3

The third programming project involves writing a program that produces a road trip cost estimator with a GUI interface. The required GUI is shown below:

The text fields above the *Calculate* button are the input fields and the one below is the output field. The output field should not be editable. Three of the input fields have combo boxes to their right, which allow the data to be input as described below:

- The distance can be entered in either miles or kilometers and represents the total mileage coverage for the duration of the trip, i.e., it would correspond to the odometer reading at the end of the trip on the vehicle's trip meter.
- The gasoline cost can be input in either dollars per gallon or dollars per liter.
- The gas mileage can be input as either miles per gallon or kilometers per liter.

The necessary calculations are as follows:

$$\text{gasoline cost} = \frac{\text{distance}}{\text{gas mileage}} \times \text{gasoline cost}$$

$$\text{total trip cost} = \text{gasoline cost} + (\text{hotel cost} + \text{food cost}) \times \text{number of days} + \text{attractions}$$

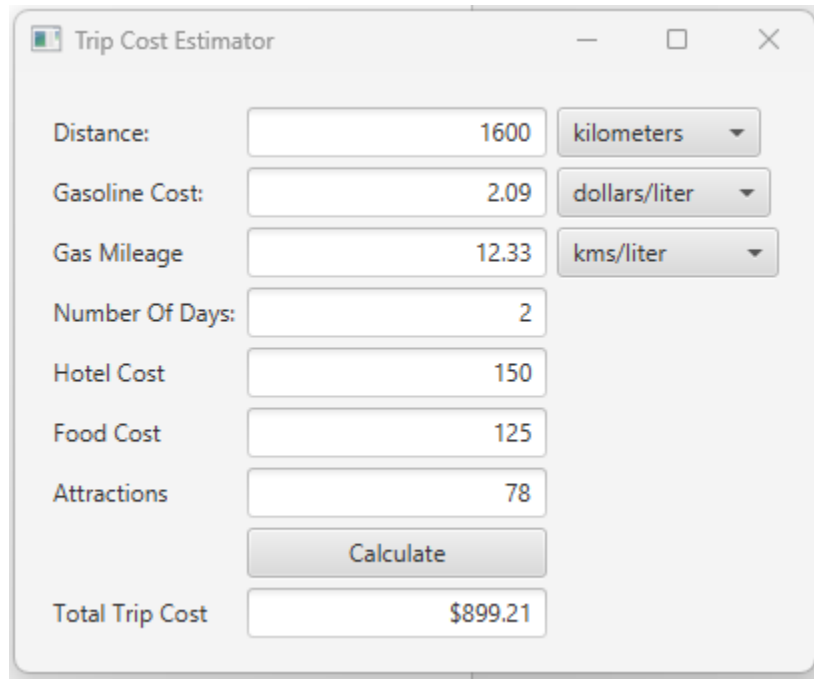

Use these constants:

$$\text{KILOMETERS_PER_MILE} = 1.609347$$

$$\text{LITERS_PER_GALLON} = 3.78541178$$

Your program should consist of two classes. The first class `Project3` should define the GUI illustrated above. The second class `TripCost` should be an immutable class that has at a minimum a constructor that creates a trip cost object and a method that computes and returns the total trip cost.

Here is another **sample output** of the program using metric units for selections:

The screenshot shows a Java Swing window titled "Trip Cost Estimator". It contains several input fields and a "Calculate" button. The inputs are: Distance (1600), Gasoline Cost (2.09), Gas Mileage (12.33), Number Of Days (2), Hotel Cost (150), Food Cost (125), and Attractions (78). Each input field has a corresponding unit dropdown menu: kilometers, dollars/liter, kms/liter, and empty for the others. The "Calculate" button is located below the Attractions field. Below the button is a "Total Trip Cost" field displaying the result "\$899.21".

Field	Value	Unit
Distance:	1600	kilometers
Gasoline Cost:	2.09	dollars/liter
Gas Mileage	12.33	kms/liter
Number Of Days:	2	
Hotel Cost	150	
Food Cost	125	
Attractions	78	
Total Trip Cost	\$899.21	

Documentation Requirements:

Follow the naming conventions previously provided in the course announcements. Please follow these requirements:

Make sure your Java program is using the recommended style such as:

- **Javadoc comment with your name as author, date, and brief purpose of the program**
- *Comments for variables and blocks of code to describe major functionality*
- *Meaningful variable names and prompts*
- Class names are written in upper CamelCase
- Constants are written in All Capitals
- Use proper spacing and empty lines to make your source code human readable

Deliverables:

You are to submit two files.

1. The first is a `.zip` file that contains all the source code for the project. The `.zip` file should contain only source code and nothing else, which means only the `.java` files. If

you elect to use a package the `.java` files should be in a folder whose name is the package name. Every outer class should be in a separate `.java` file with the same name as the class name. Each file should include a comment block at the top containing your name, the project name, the date, and a short description of the class contained in that file.

2. The second is a Word document (PDF or RTF is also acceptable) that contains the documentation for the project, which should include the following:
 - a. A UML class diagram that includes all classes you wrote. Do not include predefined classes.
 - b. A test plan that includes test cases that you have created indicating what aspects of the program each one is testing. Include the **results of your testing** with screen captures clearly showing the output for each test case.
 - c. A short paragraph on lessons learned from the project.
